

Features

- Lightweight – Less than 1/3 lb.
- Small – 4" x 5" footprint
- Protective – Sled design distributes the load evenly and protects the roof membrane
- Durable – UV-Rated
- Capable – Handles up to three 1/2" or two 3/4" or 1" pipes/conduit
- Easy to Install – No tools or fasteners needed
- Available in both 3 5/8" high and 5 5/8" high models

The Rooftop Pipe Support – part of the CADDY® line from ERICO® – is a cost-effective alternative to wood blocks, straps, clips and other labor-intensive methods for supporting pipes on roofs. This UV-rated "sled-design" support for completing low-pipe-count runs has an extremely small footprint of 4" by 5". The sled design distributes the load evenly and protects the roof membrane. The support can either be bonded to the roof or float with pipe expansion and contraction. It holds up to three 1/2" or two 3/4" or 1" pipes or conduit.

The CADDY Rooftop Pipe Support has an integral pipe-retaining mechanism that ratchets down to hold pipes securely or can be set for loose guiding to accommodate for thermal changes. The supports weigh less than 1/3 of a pound each, making them easier to carry up a ladder than some competing methods of rooftop pipe support.

Installation is easy. Remove the retaining mechanism from the support. Set the Rooftop Pipe Support in place. Lay the pipes on top of the support and snap the retaining mechanism back in place to hold the pipes securely. It's that simple. No tools or fasteners are necessary. The supports are available in both 3 5/8" high and 5 5/8" high models.

PART NUMBER	DESCRIPTION
PPRPS25H4	3 5/8" high Rooftop Pipe Support
PPRPS25H6	5 5/8" high Rooftop Pipe Support
