

# CADDY®

## Features

- For use in wood or metal 6" deep stud walls
- Easily attaches to TEB23 without tools
- Only one support needed when TEB23 is attached to stud
- Two supports used when TEB23 is mounted between studs
- Allows any box size or depth to be used
- Can be pre-fabricated prior to attaching box to the TEB23

# Adjustable Far Side Box Support

## TEB6XT

The TEB6XT, part of the CADDY® line of fasteners from ERICO, is a metal far side support designed to prevent electrical boxes and plaster rings from being pushed into the wall. This easy-to-use support accommodates stud walls that are 6" deep in a variety of electrical or datacomm applications.

The TEB6XT attaches directly to the TEB23 electrical box bracket, allowing any box size or depth to be used. This versatile support can also be pre-fabricated to the TEB23 before the box is attached.

To install the TEB6XT, simply attach it to the TEB23 electrical box bracket. The entire bracket will now accommodate the 6" stud depth, providing durable and reliable support. For added stability, multiple TEB6XT supports can be used.

### WARNING

ERICO products shall be installed and used only as indicated in ERICO's product instruction sheets and training materials. Instruction sheets are available at [www.erico.com](http://www.erico.com) and from your ERICO customer service representative. Improper installation, misuse, misapplication or other failure to completely follow ERICO's instructions and warnings may cause product malfunction, property damage, serious bodily injury and death.
