

ERICO® PORTABLE RAIL GRINDER

SBG150 – Head and Web Rail Grinder

360° Adjustable Grinding Wheel Guard Allows Grinding in Tight Areas

Adjustable Tool Rest Eliminates Operator Fatigue

CADWELD® Exothermically Welded Connections bond electrical conductors to the rail without altering the in-service performance characteristics of the rail by maintaining a continuous current.

The recently improved Portable Rail Grinder from ERICO is a well-balanced, lightweight tool for easier use and handling. It effectively grinds the rail to clean it in preparation for CADWELD Exothermically Welded Connections.

Portable Rail Grinder Improvements

Larger Power Head

Rugged 39cc two-cycle engine is 10% larger than our previous model. Maximum wheel speed is 6000 rpm. Power head handle incorporates base plate to protect engine from damage.

Adjustable Tool Rest

Allows the operator to “rest” or support the grinder on top of the rail during use - eliminating operator fatigue. The tool rest is easily adjusted to assure proper positioning of the grinding wheel.

Unique Design

Now, grind the head and web with only one piece of equipment!

Anti-Vibration Handle

The handle includes anti-vibration padding that reduces operator fatigue while grinding. New handle design provides proper balance while operating the grinder.

Lightweight

Weighs only 18 lbs. - almost 20% less than previous models.

Stronger Shaft

Reduces the possibility of damage from long term use and abuse.

Increased Grinding Wheel Stability

Reduces vibration and wear during operation.

Grinding Wheel Spacers

Identical spacers eliminate guesswork when determining proper spacer placement - ensuring proper mounting.

Adjustable Grinding Wheel Guard

Smaller guard rotates 360 degrees and allows for grinding in tight areas.

Redesigned Steel Toolbox*

Provides secure place for storage and transport.
