

Electrical contractors can count on the premium quality and ease of use of CADDY Spring Steel Fasteners — an innovative and complete range of solutions.

Premium quality and unmatched innovation, dedicated to saving you time and keeping your installations in code since 1956.

CADDY products are manufactured at the brand headquarters in Solon, Ohio, allowing us to control every step of the process and ensure each part meets our quality standards. From the steel we use to the CADDY ARMOUR coating on our spring steel parts, each step of our process ensures customers receive premium products. In addition to manufacturing our solutions in the United States, "Made in the USA" represents our commitment to contributing to local and national economies.

Through your purchase of CADDY products, you invest in American-made and engineered products, supporting hundreds of U.S.-based manufacturing jobs.

Why Contractors Choose CADDY Spring Steel Fasteners

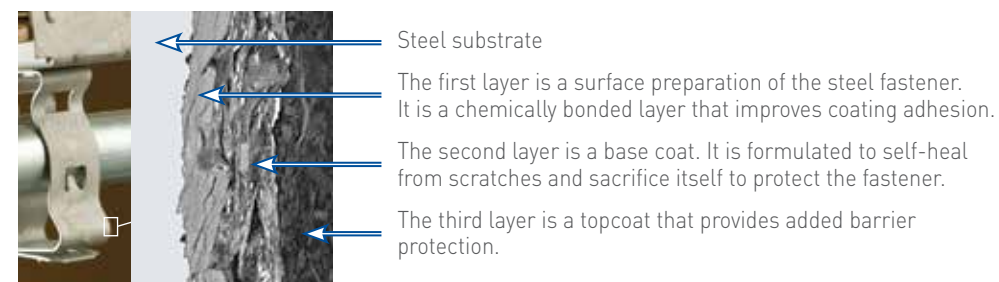

Premium Quality

Contractors need assurance the products they purchase are going to fulfill their needs and ultimately solve their everyday problems, such as costs associated with labor and material management. CADDY is committed to earning the trust of contractors by providing the best solution—one that is simple, intuitive and helps to provide a lower total installed cost.

Unlike most manufacturers of spring steel, CADDY spring steel products are all stamped, heat treated and coated with CADDY ARMOUR in-house, where we can control all aspects of the process and focus on the quality output so customers get the best solution for the job.

CADDY ARMOUR

The latest CADDY innovation in coating technology; a three-layer coating system that is RoHS (Restriction of Hazardous Substances Directive) compliant.

Comparative Test Results

To demonstrate the superior corrosion protection of CADDY ARMOUR, our engineers subjected CADDY ARMOUR and our competition to the same rigorous testing. To best simulate actual application conditions, we conducted comparative product testing* at an outside certified laboratory. Cyclic corrosion testing, developed by the

automotive industry to simulate conditions over a period of time, and salt-spray testing were conducted to assess coating performance. Fasteners were tested under installed condition to best simulate job site application conditions.

The photos below demonstrate product performance after 1,000 hours of salt-spray testing.

See www.erico.pentair.com for the terms of the CADDY ARMOUR 10-year limited warranty.
* Salt-spray testing test method: ASTM B117 / DIN 50021; Cyclic corrosion test method: GM 9540P.

Contractors can count on CADDY premium quality solutions to comply with industry codes and certifications. Our solutions undergo multiple certifications.

Unmatched Innovation

The versatility of CADDY products cover a range of assembly configurations and orientations with fewer parts. Our unique solutions are easy to use and offer flexibility to adapt to the needs of specific projects.

Contractors can reap the numerous benefits to using spring steel in the application of fasteners, including:

- High-gripping force
- High load capacity due to high tensile strength
- Lightweight
- Good material compatibility with typical steel substrates
- Ease of installation

Durability

CADDY spring steel products have outstanding elasticity and flexibility, allowing for the product to return to its original form after installation and enabling the part to be used again. Other manufacturers' products easily bend and do not return to their original shape, eliminating the option of reuse.

Ease of Use

Contractors can install many of our products without any extra tools. We offer many tool-free solutions to help make installation quick and easy. Also, without the need for tools, adjustments can be made with ease. Too often, having or finding the right tools for the job isn't easy. Helping to minimize the number of tools needed on a job site is another way CADDY strives to help our customers get the job done as efficiently as possible.

Additionally, CADDY spring steel parts provide exceptional versatility, enabling cleaner and stronger installations.

Focus on Customer

CADDY was founded and continues to operate with a commitment to serving the customer. For decades, our product development team has worked with contractors on job sites to understand their challenges and frustrations. The team then applies these observations in the CADDY lab to develop solutions to fit contractor needs, including ways to reduce time, increase ease and improve overall installation.

Since 1956, CADDY has introduced many industry-leading innovations, including:

- First in electrical industry to receive UL listing on fasteners
- SGB (and then TSGB) screw gun bracket for mounting electrical boxes between studs
- J-hook supports for low-voltage cables
- CJ6 stud-mounted cable support
- CADDY ALL-IN-ONE electrical box assemblies that combine a box, bracket and mud ring into a single stamping
- CADDY ROD LOCK push-to-install rod connection technology

DID YOU KNOW?

In 1993, the National Electrical Code updated standards that required protection to conductors from drywall screws and/or nails. Jim from Colorado, an electrical contractor, created a wire form device designed to comply with this update and introduced the idea to the CADDY product development team. While initially intended for use in wooden structures, Jim's idea had additional potential. The CADDY team refined and redesigned the concept for use with metal studs—and the CJ6 was born. It is now one of our most popular products! CADDY listens to customers and seeks to understand how to make their jobs easier.

Breadth of Offering

Contractors can count on a variety of reliable and innovative CADDY solutions. The expansive CADDY portfolio of products offers thousands of spring steel SKUs in more than 25 countries. CADDY has developed industry-leading solutions for many applications, including:

DID YOU KNOW?

Most of the CADDY part numbers refer to sizing in 1/16th. For example, 8P = 1/2" (8/16); 812M = 1/2 & 3/4" (8/16, 12/16); 16M = 1". This was created to help make a contractor's job easier when using CADDY solutions.

Spring Steel Applications

Electrical box from T-grid

Conduit from beam

Light fixture from wire/T-grid

MC/AC from wire/rod

Electrical box and conduit from wire/rod

Conduit from metal deck

MC/AC from concrete

Wire/chain from beam

Contractors take pride in their work and want to leave behind a quality job. Structural fixing systems require a high degree of reliability, and no compromise on quality can be accepted. Every detail of a CADDY fixing component—from initial conception through design, manufacturing and corrosion protection—is aimed to increase safety and reliability. CADDY products provide the consistency and dependability electrical contractors around the world have come to expect.
