CADDY® GLIDER
Electrical Box Attachment

TSGLDR1

The CADDY® GLIDER Electrical Box Attachment, part of the CADDY® line from ERICO, is designed to simplify the installation of electrical boxes and allows for final adjustment on the jobsite. The CADDY GLIDER easily attaches to any electrical box and is versatile enough to be used in a variety of applications, especially prefab where some assembly is done off-site prior to final installation.

With the CADDY GLIDER, installers can attach one or more electrical boxes to the Telescopic Screw Gun Bracket (TSGB). Once attached, the installer can easily adjust the box location and the width of the TSGB between the studs. And, because it's smaller than competitive parts, the CADDY GLIDER allows closer installation of multiple boxes between or against the studs. Up to three boxes can be installed in a standard 16” spacing. Competitive products only allow two.

WARNING
ERICO products shall be installed and used only as indicated in ERICO’s product instruction sheets and training materials. Instruction sheets are available at www.erico.com and from your ERICO customer service representative. Improper installation, misuse, misapplication or other failure to completely follow ERICO’s instructions and warnings may cause product malfunction, property damage, serious bodily injury and death.
